by  MovieTech

...a very light-weight and flexible jib arm - ideal for digital SLR cameras.

Owing to its small packing size and its reduced weight of only 3.9 kg thanks to carbon tubes, the jib is designed for quick and easy use like all ABC Products equipment. Moreover, the extremely short assembly time of only a few seconds and a QuickPin system allow a rapid change of location and camera angle.

Not only do the boom length of 1.52m and a payload capacity of 4.5kg make it an extremely versatile piece of equipment: the shot can be well prepared thanks to a parallelogram bar that can be continuously changed allowing for an automatic tilt as well as precise adjustment of the tilt head angle. A further advantage is the special swivel system that enables the Light-Jib to glide avoiding any disturbing swinging when it is stopped. Many other details such as a built-in bubble level, quick release and built-in brakes (horizontal and vertical) make the DSLR Light-Jib the ideal equipment for professional shooting with a DSLR.

The DSLR Jib can be operated from behind like a crane or at the front like a jib

The jib head can be set to tilt automatically, the angle of the tilt is pre-selectable

The DSLR-Light jib can be reduced to a very small packing size.

Optional accessories:

- tripod 132 X
- monitor TFT-7"
- adaptor plate D80
- ball adaptor plates 75/100mm
- counterweights
- sand bags
- soft case

About ABC ...

ABC Products has been active in studying solutions for the moving camera technique for many years. The main emphasis of the innovative developments is on consistent lightweight construction with high functionality and longevity: broadcast equipment for everyday use on the set, products include: camera balance systems (HandyMan) hand-operated or body supported for different camera weights. Light Cranes with different lengths, from the consumer up to the professional device with remote Head. Light Dollies with track systems. ABC Products is also able to customize besides offering an extensive list of accessories which have all one in common: filming with the moving camera!
